

CSA/UL/cUL Labels

What Are CSA & UL/cUL Labels?

UL and CSA labels provide safety-related information and let consumers know that a product has undergone safety testing and is compliant with stringent safety guidelines and specifications.

For a product to bear either a UL or CSA mark, not only does the product need to be certified, the label itself must also be certified. UL or CSA labels need to meet certain criteria related to their construction. These criteria help ensure that the label will remain legible throughout the lifespan of the certified product.

Certified Labels

Trust CIS to supply your CSA/UL labels. We supply CSA labels that have been approved by the CSA, and our UL labels are supplied by a participant in the UL Authorized Label Supplier Program. Our CSA/UL labels are constructed using preapproved materials and print methods, so you can be assured that your customer's certification labels are compliant.

That means your labels meet all applicable standards and can be backed up with official certification paperwork in the event of an audit.

Flexible Certified Label Production Options

Our UL and cUL labels can be produced on both digital and flexographic presses. This means we can offer smaller quantities of labels with rich 4-color process digital printing in ANY shape label up to 8" wide in virtually any length.

For larger quantity requirements, our flexographic labels are produced with UL and CSA labels are produced with approved materials and inks including varnishes and laminations.
